Part 1: Initial Setup and Progress

Group Members: Cristian Marrufo, Aidan Hebert.

Physical Phone Availability: We don't currently have access to a physical android phone.

REST API: JSONPlaceholder.

- The API selected (JSONPlaceholder) is often used for testing and prototyping purposes. More specifically, it provides the resources for sample posts, comments, and various types of data. In our project, the API will be utilized to fetch sample post data, demonstrating how the application retrieves data from a remote server.

Basic UI: Project files for basic UI of application are also included.
